EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Siragusa on January 19, 2005.

The application has been amended as follows:

In claim 1, at the end on the claim, ---wherein said key and keyway are established longitudinally along each of said first and second housings.--- has been inserted.

In claim 11, at the end on the claim, ---wherein said key and said key slot are disposed longitudinally along each of said first and second housings.--- has been inserted.

Claims 21-22 have been canceled.

Remarks

2. Claims 21-22 have been canceled and the subject matter of these claims has been incorporated into independent claims 1 and 11, respectively.
3. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or suggest a damper assembly (or associated method or

Art Unit: 3726

assemble) comprising: first and second housing and chambers, having one of a key and keyway (keyslot) to provide desired alignment between the first and second chamber, wherein said key and keyway (keyslot) are established longitudinally along each of said first and second housings, in combination with the other claimed subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Applicant amended claims 1 and 11, in the response dated November 16, 2004, to recite the limitation regarding the key and keyway. The Examiner contacted Applicant regarding JP 04-088232, Fig. 3, showing a similar device having what appears to be a detent mechanism (key) and a keyed-recess joint between the two housings. The Examiner stated that he believed this reference to generally teach providing a key and keyway between the two housing for alignment, but pointed out that the reference did not teach or suggest that the key and keyway are established longitudinally along each of said first and second housings, as found in claims 21-22.
